

CHAMBER WASHER

Industrial grade chamber washer. It is fully universal – it can wash all of your equipment handling every kind of soiling.

ECONOMICAL + ENVIRONMENTAL FRIENDLY

It is a modern, economical, environmental friendly, but simultaneously compact device which is used to keep clean most of the equipment at a production facility.

UNIVERSAL USE

It can wash almost everything – bins, carts, bread baskets, and all the equipment which is placed in a correct position will be transferred from a stained one into a clean hygienic tool.

SPECIAL PURPOSE MACHINE

Short wash-time (starting from 3 minutes for baskets washed every day), low water consumption (ca. 5l of water is used for 40 baskets), high pressure, a centrifugation system and a high-tech control system makes this device much faster, universal, and taking up much less space comparing to currently used belt washers.

Additional asset of the machine is that only one person is needed to operate it, meaning that after loading and starting the wash cycle the operator can move-on to other tasks.

INNOVATIVE WASH CYCLE

It involves minimal power and water consumption, using less detergents, and shortening washing and drying process time.

The cycle consists of couple of steps implemented by a controller which fully monitors and carries on complex tasks.

SIMPLE, COMPACT CONSTRUCTION

with easy loader, taking up small space considering its capabilities makes this machine one of the best washing devices in food industry.

FULLY UNIVERSAL

can wash all of your equipment and handle every kind of soiling.

EASY LOADING SOLUTION

it is one of the features enabling fast washing process. To-be-washed equipment is placed on standard racks (for baskets, bins, and sheets) or special trolley and racks which are then rolled into the washing machine.

ECONOMICAL, FAST AND EFFICIENT

in a short time, it transfers your stained equipment into clean hygienic tools.

STAFFING SAVINGS

only one person is needed to operate the machine and the operator can do other tasks during the cycle.

UNRESTRICTED WARM WATER SUPPLY

in basic version, the heating source is electrical power, which can be replaced or act together with any other water heating source e.g. heat recovery from the ovens or existing water heating system.

- Universal, economical, compact
- It can wash: bins, racks, sheets, baskets and many other bakery equipment
- Efficient: 10l of water per 40 baskets
- Faster than belt washers. 3-8 minutes (washing, rinsing, and drying)
- Easy 1-person operation
